

On-site Crating

S E R V I C E S

We know it's challenging enough to manage and support your current equipment and inventories, and few companies truly have the necessary facilities to store equipment and goods for shipment, as well as the packaging materials and staff skilled in packaging valuable assets. Why devote space and already limited staff time to packing and securing your valuable assets when you can rely on Packnet's On-site Crating Services to handle your complicated and time-consuming crating issues?

Not happy with your current vendor, or just getting started in managing your own crating? Check out Packnet Ltd. Packnet is a full service custom packaging company. This is what we do, and we do it well. Let us think inside, outside and all around the box so you can get back to your business.

Crating & Packaging Services we offer include:

- ✓ *On-site Product crating*
- ✓ *Product Un-packing*
- ✓ *Ocean Containerization*
- ✓ *Skidding and Palletization*

The Packnet Process

Step 1 Consultation

Packnet experts discuss dimensions, weight, fragility, mode of transportation, and final destination requirements prior to arrival.

Step 2 Customization

We understand that all packaging is not equal and your assets don't necessarily fit into existing containers. Packnet's customization talents are the reason we stand out from the crowd. We can build custom crates or containers to protect your assets and meet all the necessary standards, no matter the size.

Step 3 On-site Arrival

Our On-site Crating Services team arrives on site to crate your goods from the convenience of your warehouse. We work with customers who need solutions for a single asset to a fully managed crating operation at your facility. We prepare and crate items for moving locally, nationally, internationally, and by land or sea.

On-site Crating

S E R V I C E S

Packnet will ensure your crating meets the destination country regulations for solid wood packaging. We have extensive experience in the ISPM 15 standards for wood packaging materials, standards and compliance.

Our services and solutions for international export shipping meet all requirements including the use of VpCIs. The use of VpCIs, water vapor barriers and desiccant are to protect electronics and items with sensitive and bare metal surfaces that are traveling via ocean containers. Additionally, our heat shrink-wrap services will protect your valuable assets from weatherization and damage. Your valuable products are packaged to minimize damage from shock, vibration and corrosion.

Contact

Contact a Packnet sales representative today at 952.944.9124 for a complimentary site visit and consultation for mobile crating services.

Testimonials

"Packnet has been extremely helpful and efficient. They even went the extra mile and stored some of our equipment in their warehouse when we experienced a working delay and couldn't ship as soon as expected. Even though they were a bit more expensive for packaging one of the systems than another packaging company, the total cost for services provided easily justified the value Packnet provided. They saved us money in the long run. Their experience and knowledge was superior!"

- Doway Technology

"It's not just the crating, it's the solution. Packnet puts the customer in the right frame of mind."

- Global Medical Technology company

"We used to think our little company couldn't afford to hire an 'outside' packaging service. Now we know better – thanks, Packnet! Now we can invest more time doing what we're good at."

- Mendota Mantels
